

DISCOVER THE TREES IN YOUR NEIGHBORHOOD

Wellness Wednesday

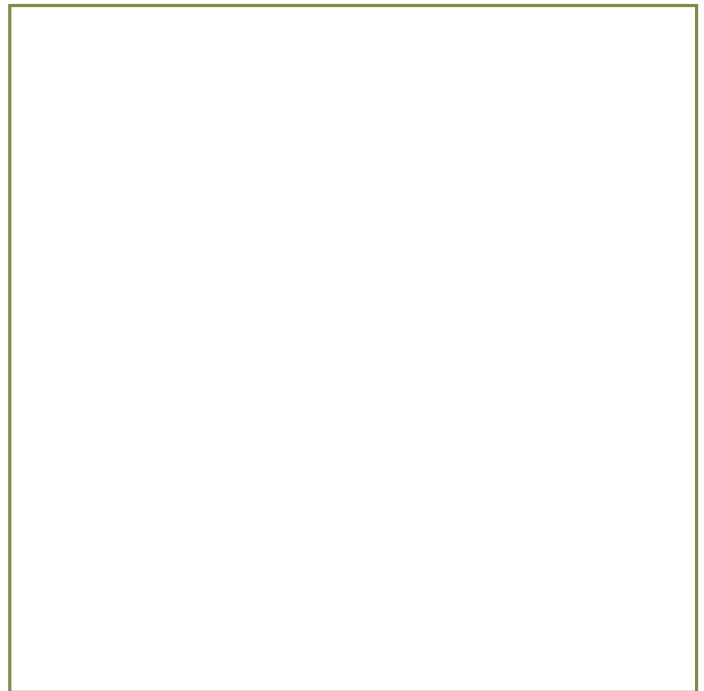

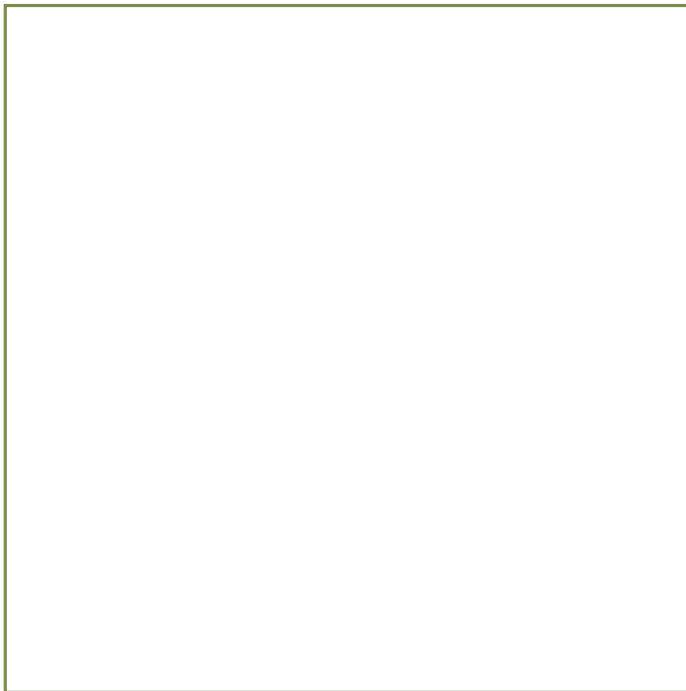

Explore your neighborhood and find an area with trees – it could be in your backyard, in a park, or along a street. Pick two different trees and observe the similarities and differences between the two.

Here are some characteristics of trees you could discuss: leaf shape and texture, bark color and texture; twigs, fruits, flowers seeds; height and shape of tree.

Ask “***What characteristics can we use to identify trees?***”

Below draw the comparison of the two trees

Activity Reflection

- What did the trees have in common? How were they different?
- How might some of the tree characteristics that you noticed affect how the trees grow?
- When looking at the trees in your neighborhood, are there a lot of different types or similar?

Why do you think it is that way?
